WHO WE ARE

Page 117 - 149

A WARM WELCOME

Feeling good at home is a big part of coping with our busy lives. And a large part of this comes from harnessing the ever changing and emotive qualities of light.

We can't always say why we gravitate to a favourite chair, or why it feels so good to open our eyes to the emerging morning sun. But often, it's the magic of light which draws us in.

For the last 70 years we've made it our passion to understand the many elements of light. From making a cloudy day seem brighter or helping a hot room feel cooler and more comfortable, we seek to manage and enhance the elemental qualities of light.

We've learnt a lot in this time, and we'd like to share it with you. So you can enjoy beautiful light in every room with inspired and elegant solutions for your home. Welcome to The Art of Window Styling.

LIVING WITH LIGHT

IT ALL **BEGINS** WITH LIGHT

Our daily experience is deeply affected by our environment; and our need to work, play or find a little private time to unwind requires different moods from different spaces.

Effectively controlling light and maintaining a comfortable temperature is a key part of setting a relaxed, welcoming atmosphere in every room. Choosing the right selection of window coverings, combined with nuanced artificial lighting and insulation will instantly begin to transform a house into a home.

THE QUALITIES OF LIGHT

Light has the power to energise us. To soothe. To make us feel revitalised or restful. It triggers a broad spectrum of sensations and is one of the most powerful ways to influence the senses. But before you can harness it, you need to understand it.

Depending on where you are in the world, and which direction your home faces, you will experience light in different ways – bright and vivid or gently paler - and with strong heat or weaker, more temperate warmth.

Understanding your home, and its relationship to natural daylight, is the first step to a place that feels as well as looks, beautiful.

UNDERSTANDING YOUR LIGHT COMPASS

Every room in your home will have its own quality of light, depending on which direction it faces, how large the windows are and whether it is on the ground floor or upstairs. Start by finding the position of north in your home. Then work out where each room lies on the compass. From here you can begin to work out the direction of the light entering your home.

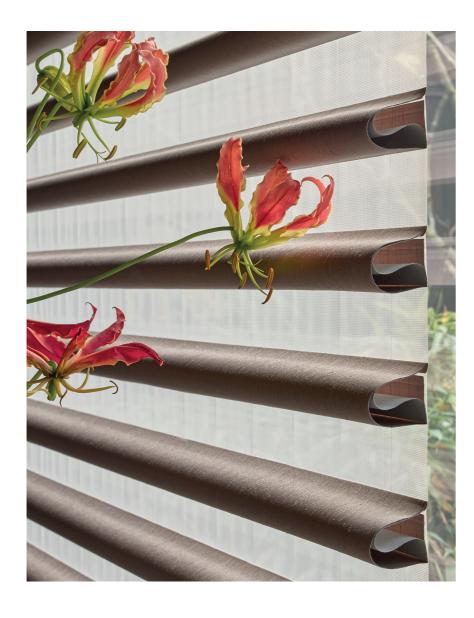

North-facing

North-facing rooms will receive lower light levels in a more diffused way – creating a calm, restrained feel. These rooms may need help in reflecting and increasing light.

East-facing

An east-facing bedroom is perfect for those who like to start the day with a 'Sun Salutation' yoga pose. Sleepy-heads who prefer a lie-in will need to manage the sunrise.

South-facing

A south-facing room will enjoy the most natural daytime light, which may need filtering and softening if it creates a bright midday glare.

West-facing

These rooms come alive in the evening. If the light's strong, cool it with soothing tones at the window such as grey. Or, maximise its effects with light-enhancing window fabrics.

Seasons

When you begin planning your décor, the seasons are an important place to start when considering tone and palette for a room, and as the year cycles through, how your requirements may change.

During summer months, the sun is higher in the sky so it may not create the blinding glare which can be experienced with a low winter sun.

Trees in full leaf can diffuse the harsh bright midday sun in a south-facing room.

A white-washed garden wall can bounce muchneeded light back into a north-facing kitchen.

In autumn and winter, bare trees will reveal the views beyond so extra privacy may be needed if you're suddenly looking out onto a busy street or through next door's bedroom window.

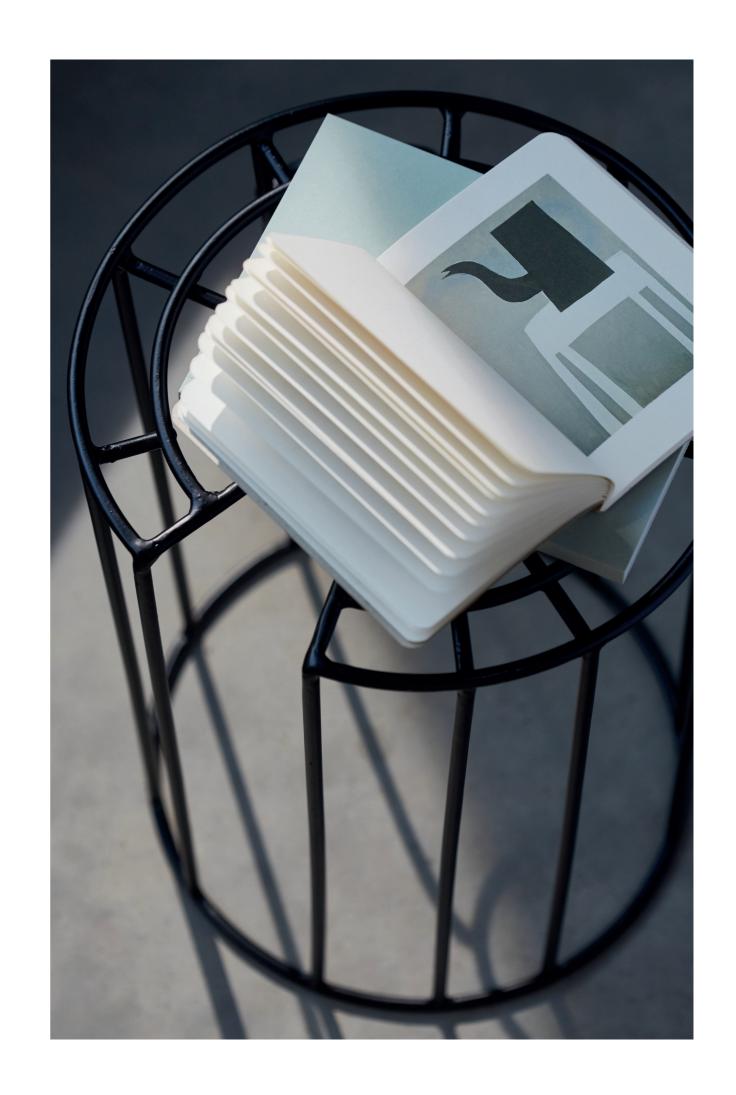

DECORATING WITH LIGHT

UNDERSTANDING HOW LIGHT CHANGES

Too much natural daylight – if it's glaring and unforgiving – can feel uncomfortable to sit in even whilst it gently warms the skin. But a room which relies on artificial light can feel flat and cold.

Learning how to soften hard light, maximise low light and find a sensitive balance between the two is an essential part of making a successful design scheme.

Colour

When is a plain white room not a plain white room?

Imagine placing an earthy ochre-hued shade at the window. The sunlight, whether summer-clear or winter-crisp will be given a gentle warm tone as it permeates through the fabric.

Replace it with a bright, icy blue shade and instantly the room feels fresher, sharper and colder – with the new colour transferring its qualities to the light which passes through it.

Reflected light

Light can be enhanced and managed with some clever, but simple tricks. Stuck with a dark kitchen? Choose hard, bright surfaces like glossy kitchen cupboards or work tops which bounce all available light back into the room. Or, try a collection of vintage mirrors covering the end wall of a long hallway to magnify the light - creating the illusion of two classic pendant lights, or an extra window.

Diffused light

Bright light can cast long shadows which create gloomy, dark, unwelcoming corners. But, choosing a window covering using voile or sheer fabrics can help filter and disperse light more evenly throughout the room - making the whole space feel more appealing. Or, create intricate, detailed shadows using perforated Vertical Blinds with long slats to shape the sunlight as it passes through.

Layering

The light changes as the day progresses, and so should the way you manage it.

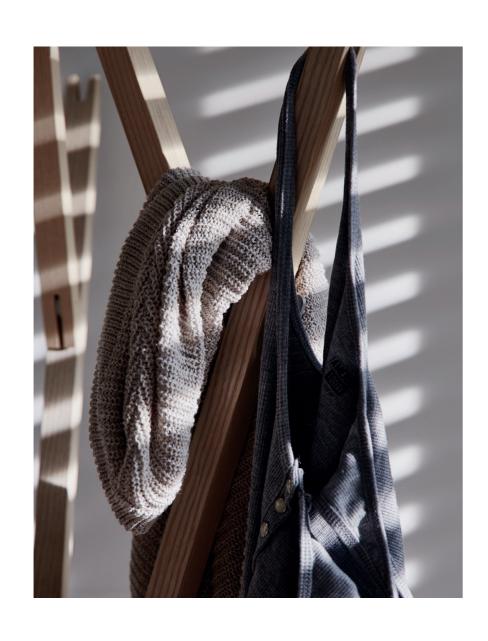

The key to making a scheme rich and engaging is knowing what light to use, and when. Consider how a room's purpose may change over a day and then begin layering lighting solutions.

Use bright task lighting in a bedroom where you choose work outfits, or gentle diffused daylight through slatted blinds for a quiet read. And at bed time, restful, golden, low lighting on a bedside table.

MAKING LIGHT WORK FOR YOU

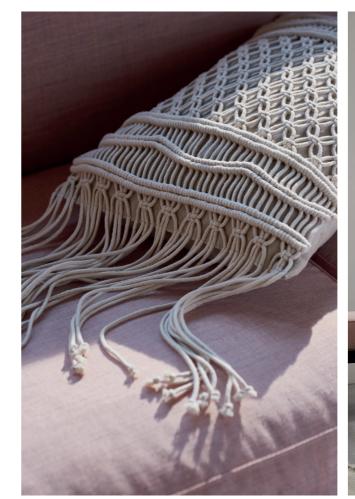

MASTER THE LIGHT FOR YOUR HOME

When planning your décor, ultimately you want to know it will work for how you live, not just how it looks. For every mood you want to create, there is a way of combining natural and artificial light to produce just the right ambience with a natural flow all year round.

BATHE, DAYDREAM AND UNWIND

Sometimes you may want to feel relaxed, but not sleepy. Simply enjoy a calmer space. The room needs to be bright enough to enjoy a soothing bath, yoga or reading, but not so dim you drift off. The effect should be of ambient lighting, nothing to distract or draw the eye.

Harness the freshness of day or evening light but diffuse glare with a window treatment like Silhouette® Window Shadings or Pirouette® Window Shadings that filter and disperse the light evenly through the room. Even a simple Roller Shade in classic white will create a soothing glow. Standard lamps and uplighters can lift dark corners without demanding too much attention, making the balance of light in the room seem even and peaceful. Look for soft fabric folds and weaves that work with the sun's rays and softly filter light in the room.

STAY BRIGHT. KEEP ALERT. LET'S GET TO WORK.

Some days are about action, concentration and clear thinking. Waking up with natural daylight, where possible, is the gentlest way to energise our senses. Then we need to turn to the task in hand, and create a pool of light to draw the eye to the place you want to work.

Enter task lighting; perfect for providing the light you need to work in your home office, sew or read.

An anglepoise lamp over a desk or spotlights over a kitchen island will pull the attention to the work area, and when available, complement it by harnessing the natural power of light.

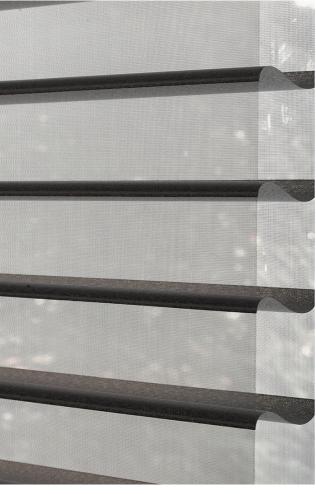

COOK, EAT & SHARE

Cooking for friends or family is one of life's great pleasures. And it's even more rewarding when everyone can enjoy each other's company in a warm, welcoming environment.

When planning a space to share with others you may want to close-in the room, creating a cosy space where people can perch happily around a kitchen island whilst you create a feast. An oversized pendant lamp hanging over a large dining table, or a colourful Roller Shade creates an attractive focal point where people gather, whilst allowing you enough light to cook or serve.

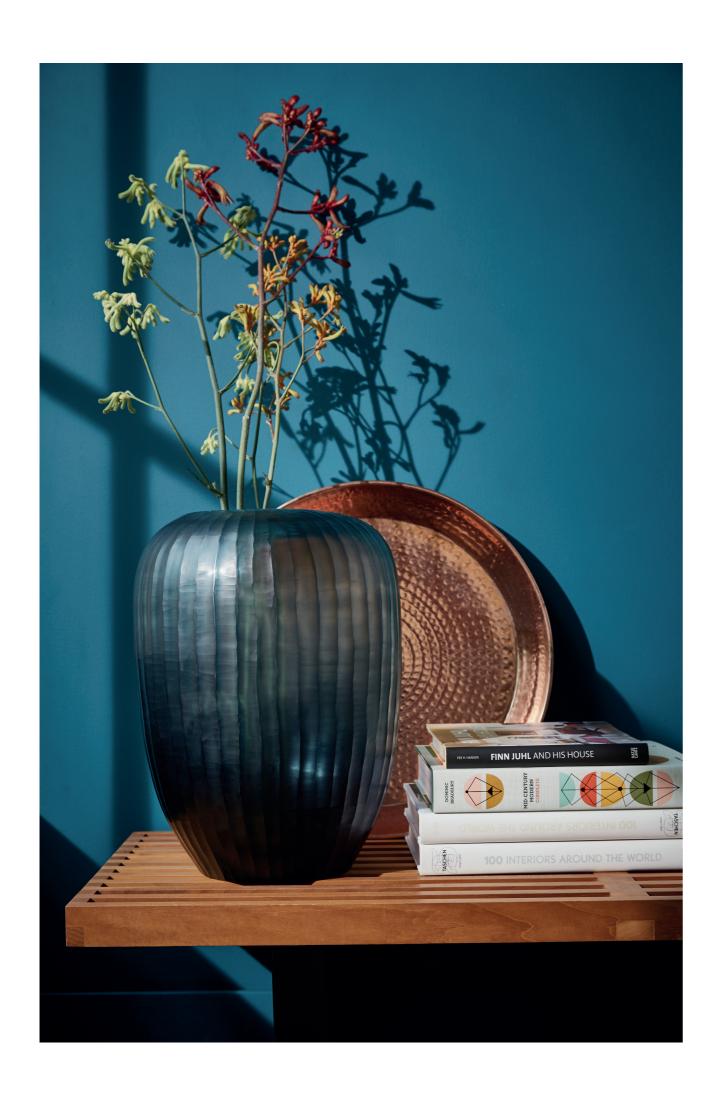

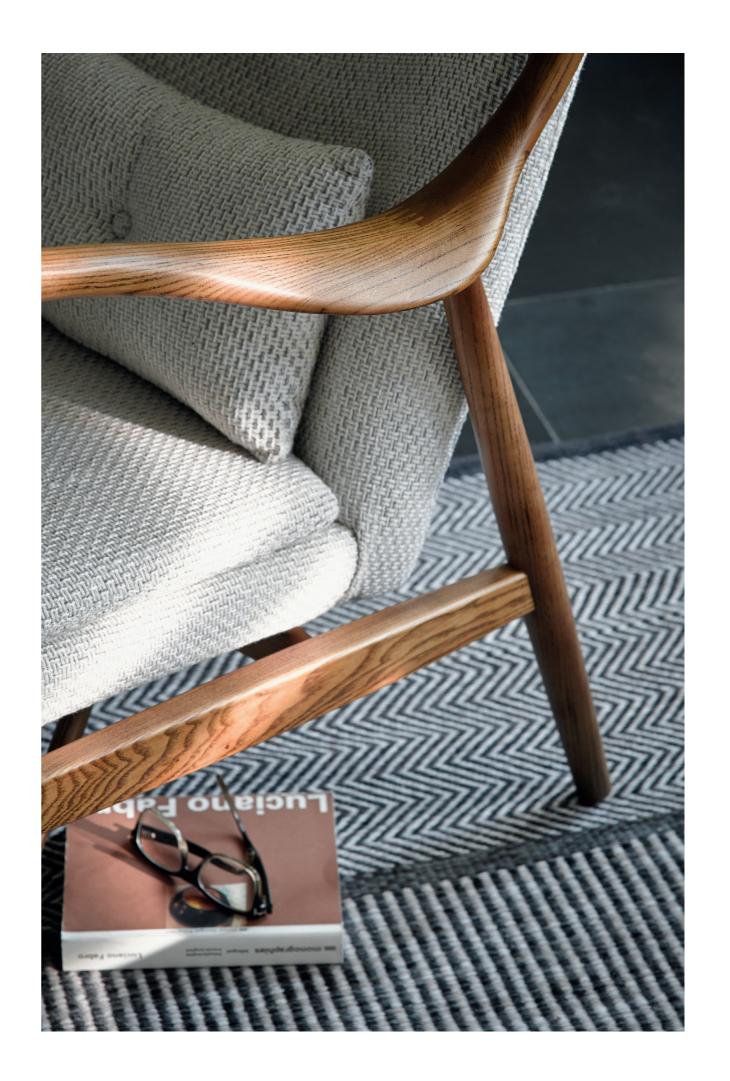

RELAX & INDULGE WITH SOME 'ME TIME'

The day is done. It's time to slow the pace and change the mood. A perfect opportunity for accent lighting to shine. What will you make a feature of? A cosy nook for curling up in with a good book, beads of light under shelves to highlight your library or a traditional brass swan neck light over a treasured artwork?

By using a mix of downlighters, uplighters, tracks and table lamps, you can create a beautifully layered and comforting look. This gives texture, focus and shape to general lighting, adding depth and shade - with shadows in some corners and pools of light in others.

Using lights at varied heights make a large room with high ceilings appear cosier. Lamps around the room will also help create soft, low pools of light. And don't forget the view. Choosing a transparent sheer window covering can make a glittering cityscape or star-filled sky a stunning backdrop to your room.

CREATED FOR YOU

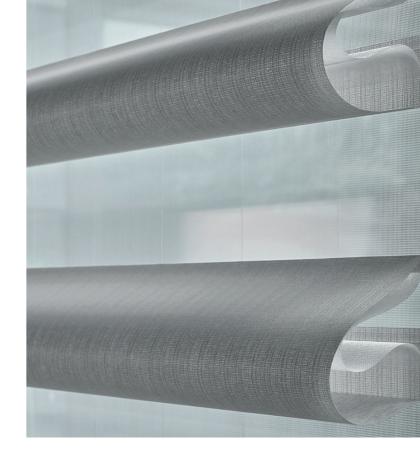

DESIGNED TO MAKE EVERY HOME MORE STYLISH

Crafted to the very highest standard with a precise attention to detail, our unique collection of 'made to measure' window coverings have been designed to enhance every room they grace. It's a complete range; covering all styles from classic to contemporary, with colours, fabrics and forms that flatter every window, old or new, to give you a world of choice.

PIROUETTE® WINDOW SHADINGS

Dramatically filter light

Introducing our latest innovation: Pirouette® Window Shadings combine a single sheer undulating fabric fold to provide a clear, unobstructed view through to the outside, all the while maintaining a discreet level of privacy inside

The soft fabric vanes attached to a sheer backing appear to be floating, and draw natural light into the room. The range features refined fabrics inspired by the organic beauty of raw silk and linen, with a palette including soft, neutral tones and breathtaking pops of bold colour.

LUMINETTE® PRIVACY SHEERS

Sheer beauty

These stylish sheer drapery panels have vertical fabric vanes which rotate 180° to offer unlimited light control and privacy options. Diffusing light and spreading it evenly throughout a room to maximize daylight and reduce the need for artificial light, the fabric vanes can also be positioned to minimize UV rays entering a room – protecting furniture and flooring from fading.

SILHOUETTE® WINDOW SHADINGS

Create beautiful ambient light

For lovers of light, Silhouette® Window Shades offer a beautiful way to enhance every ray. Our unique fabric vanes filter the starkest daylight and gently diffuse it across the room, or draw in the fading light to maximise it for as long as possible, ensuring you get the most out of the daylight.

DUETTE® HONEYCOMB SHADES

Energy-saving innovation

Modern in look and feel. Innovative in design, Duette® Honeycomb Shades combine a honeycomb structure to filter light as well as manage your energy efficiency. Working at your windows and doors to keep out the aggressive heat of summer but also helping to keep in the warmth during winter and your home energy efficient all year round.

TWIST™ SHADES

Contemporary light control

Strong, bold design and smooth, slick operation are the signature qualities of our Twist™ Shades range. These combine the ease and simplicity of a roller shade with the increased ability to control light and privacy that comes with the mix of fabrics and opacities.

SKYLINE GLIDING WINDOW PANELS

Sleek, modern panel track blinds

Beautifully clean and crisp, Skyline™ Gliding Window Panels give a sleek, modern look to any sized window. Open, they stack tightly to offer the maximum view; closed, they display their rich fabrics and texture. Available in a huge selection of fabrics, they also coordinate seamlessly with Designer Roller Shades.

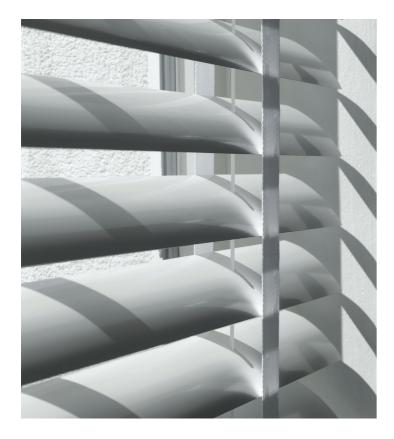

ROLLER SHADES

Made to measure perfection

We individually craft every Hunter Douglas Roller Shade. It's what makes us different - our meticulous attention to detail. We elevate this go-to classic to another level with premium fabrics and fittings and bespoke production for every shade. With a range of options, including cordless operation and extra-large widths, our Roller Shades are at home in a refined period property with sumptuous drapes or to create a bank of bold colour in a contemporary glass penthouse.

VENETIAN BLINDS

Super-sleek design

We know there can be huge variations in what you need to make light work for each specific room. So, we've created our Venetian Blinds in five slat sizes to cover every possibility. From the wide slats that recall island style, to slim slats that allow maximum light with great privacy, you can choose from a range of styles in sumptuous finishes.

VERTICAL BLINDS

Big on style

Large windows love Vertical Blinds. They completely recess when sliding or bi-fold doors are thrown open to link your interiors with an outside space, but can also be used to manage light and privacy with great precision.

From manual to motorised options, we do all the work for you.

COUNTRY WOODS™ BLINDS

Natural wood style

Traditional and timeless, these rich hardwood slats complement the lines of any room. There's a wide selection of natural tones or bold painted finishes, and choose a classic slim slat which offers maximum privacy or a wider slat style which lets more light into a room.

TRENDS

MARIANNE VAN LEEMPUT

Hunter Douglas Textile Designer

At Hunter Douglas we are passionate about innovation and design in every part of our process. In our studio, trends and fabrics begin life as an idea on the drawing boards of our designers who take inspiration from the natural and built environment. I'd like to share with you three key trends for interiors which are featured in our latest window covering collections.

SCULPTURAL

Size isn't everything

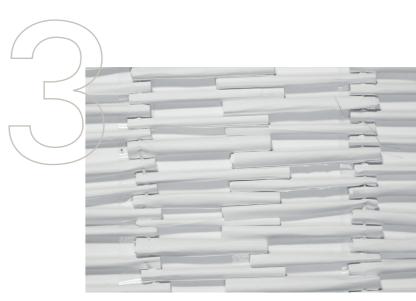

A small element counts: a felt bag or basket for magazines, or a sharp-lined coffee table, can bring this look to a room.

Go with the grain

Natural hues, such as graphite, stone and off white, allow the forms to take centre stage.

SCULPTURAL ARCHITECTURE AND ACCENTS

Create a calm and peaceful environment. A place for reflecting, where everything is in harmony and balance. The light then becomes a creator of patterns and forms.

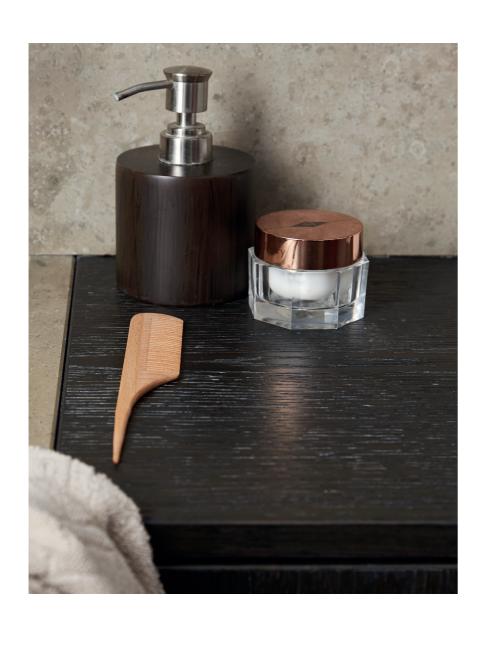

It changes the atmosphere in any room.

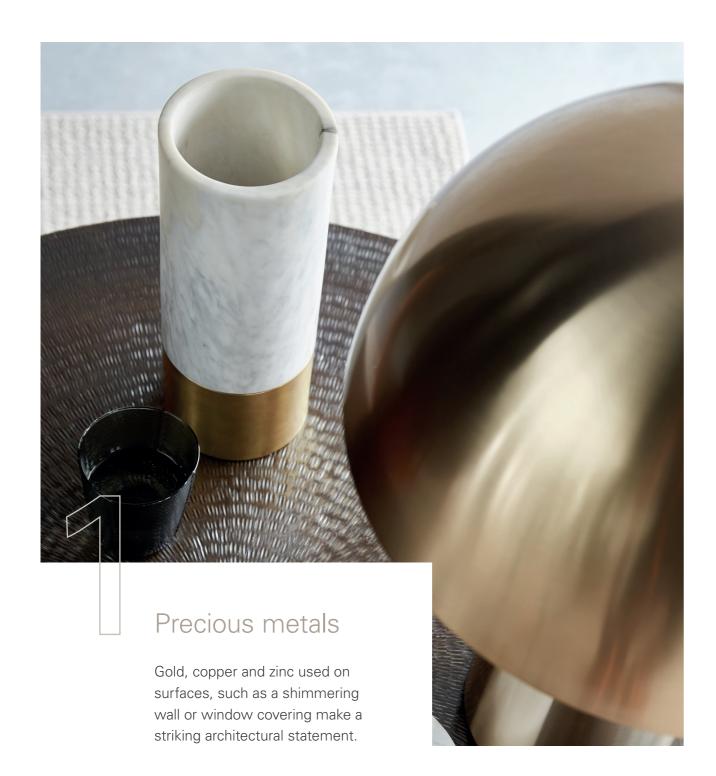

Using sculptural architecture in the home

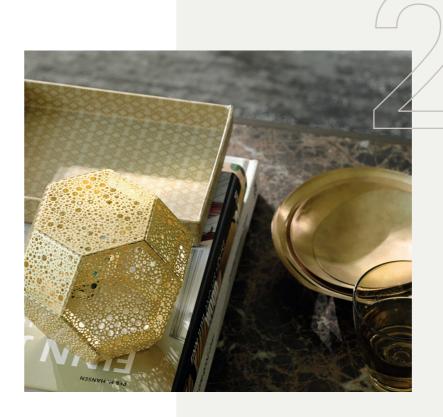

- Earthy, natural material like woods add a warm contrast to the sculpted lines.
- Look for textiles in one tone, formed by small patterns or weaves to create subtle shadows and interest.
- Repetition is key; the multiple folds of blinds are offset with the fabric vanes.

METAL FINISHES

Mastering light

Refined structures softly reflect and play with the light.

One with nature

Inspiration comes from our precious earth, capturing the diversity between matt and shiny, dark and light.

METALS IN CONTEMPORARY DESIGN — MAKE A STRONG DESIGN STATEMENT

This is a new type of luxury, inspired by the heavy metal treasures of the earth and sea. Innovative material finishes reflect the richness of wonderful natural materials. Gold, copper and zinc make precious piping or small details.

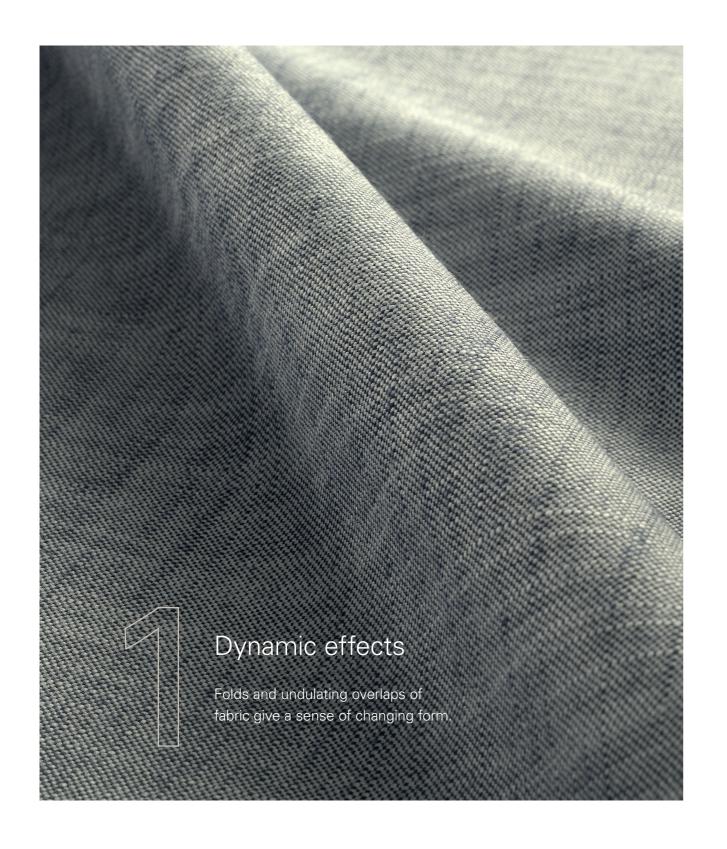

- Use angular accents or frames with fine lines of precious metals to create elegant detailing.
- Golden, copper and zinc surfaces combined with matt, soft materials capture the decadent 1970s a trend very much back in vogue.
- Aged metal effects and structures highlight craftsmanship, such as lighting details or window coverings.

TRANSPARENCY

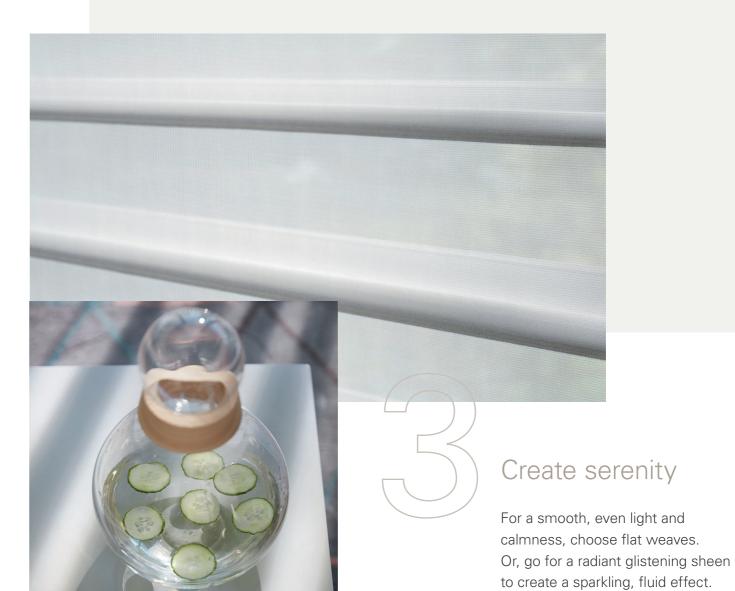

Diffuse the light

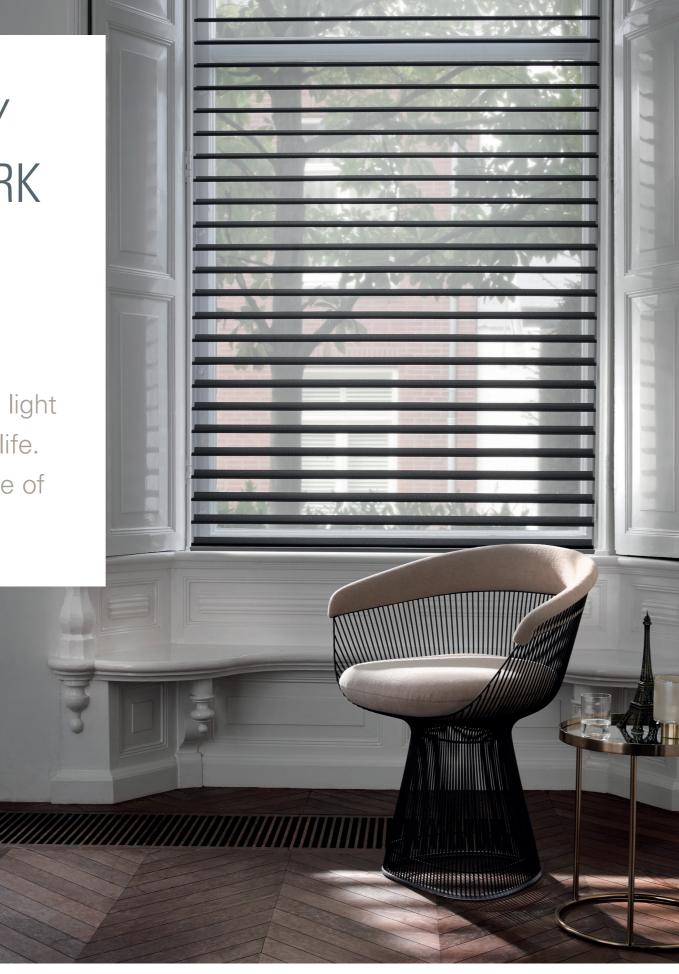

Movement affects the qualities of transparency, from a delicate shimmer to a flat filter of light.

TRANSPARENCY AND LIGHT WORK BEAUTIFULLY TOGETHER

A transparent fabric makes light more visible. It brings it to life.
Without one the experience of the other is lessened.

Using transparency in the home

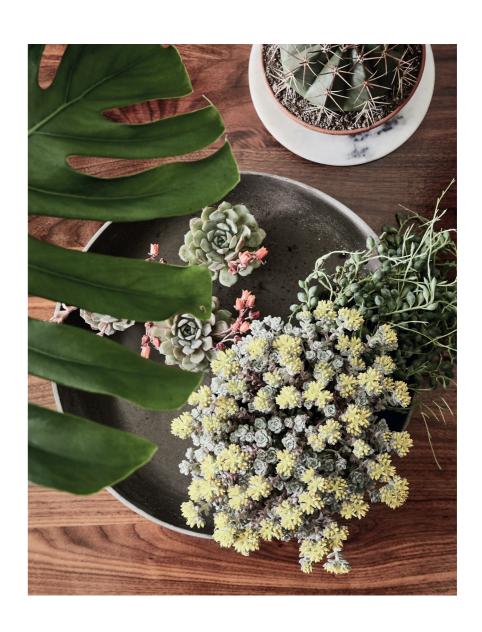

- When using a transparent fabric, it's the window covering structure that will decide the quality of the light; from fluid fabrics to structured vanes.
- Transparent materials work well when reacting against a more solid one creating a stark contrast.
- Even a limited palette can create dramatic effects when it moves from lustrous metallic finishes to subdued, flat concretes.

TAKE IT HOME

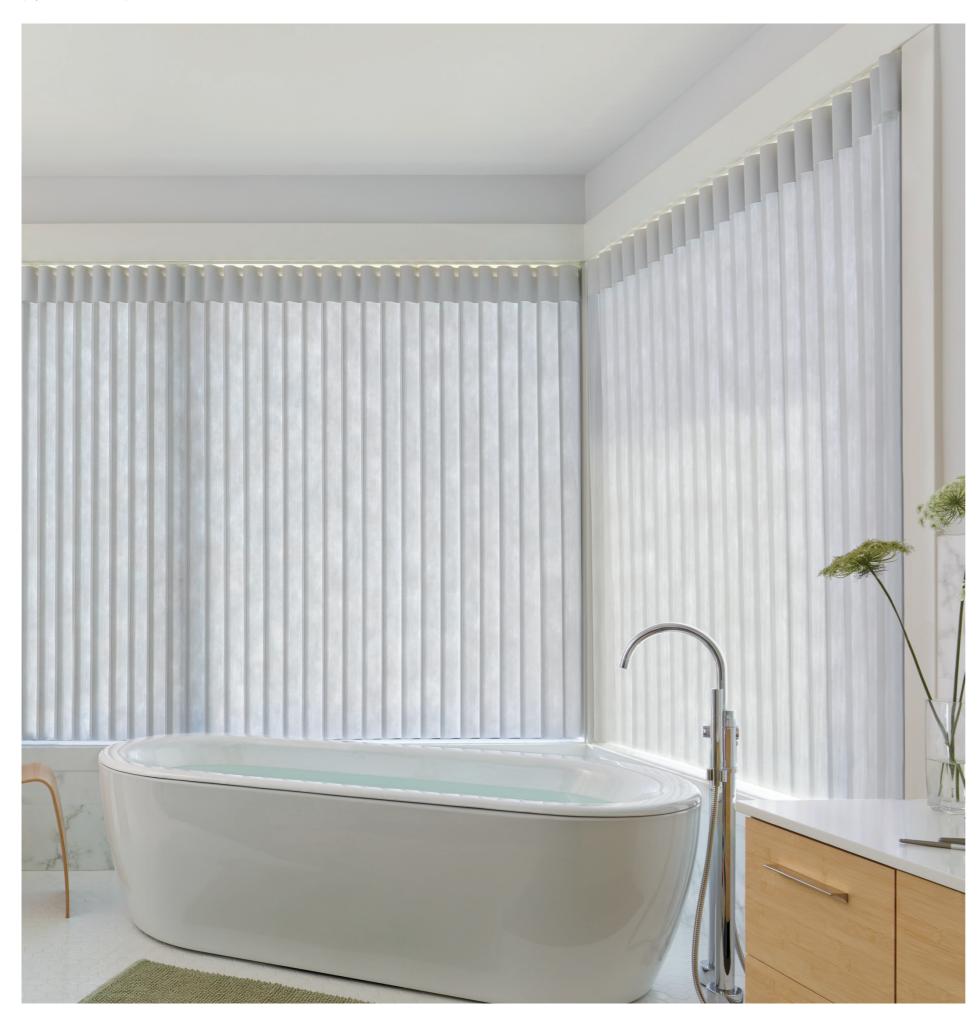

STYLE TO LIGHT UP YOUR HOME

As well as its own unique aspect and position, every home also has its own distinct style. From Georgian refinement to the angular drama of a city high rise, the right designs have to fulfil both aesthetic and practical demands.

1. Working with your building type

Sharp and lean or old and quirky; your window type doesn't have to dictate your decorating style, but it's good to work with your building type in mind. The clean sharp edges of a bold colourful shade can enhance the beauty and quirkiness of an old window frame.

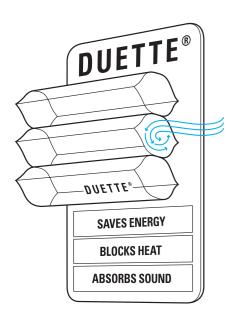

2. Scale

Large panes of glass can feel stark. Consider how you can break this up: The undulating soft folds of Pirouette® Window Shadings can stop wall to wall picture windows from overpowering the space and soften edges – so you can just admire the view.

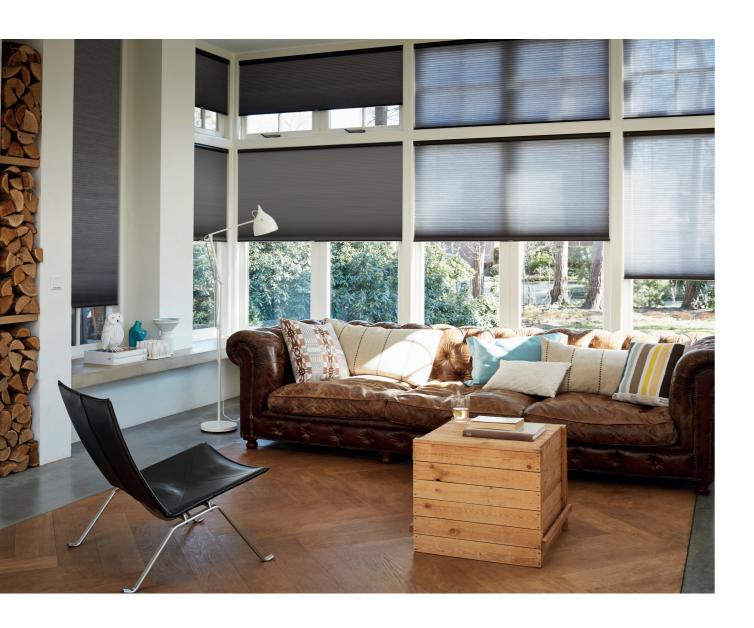

3. Energy efficiency

50% of the heat you use in your home can be lost through windows. And heat coming in from the outside (thermal gain) can make a room uncomfortably hot and stuffy. Products like Duette® Architella® Honeycomb Shades can help you achieve better energy efficiency, keeping rooms warmer in winter, cooler in summer and energy efficient all year round.

4. Privacy and transparency

Need a deep sleep? Have an overlooked north window but need daylight to work? As all our products are made to measure, we can help you resolve the individual issues of each room in your home with solutions that reflect how you live, as well as your style.

5. Stand out

Think beyond the obvious options. Use a sleek modern Roller Shade in an unexpected pop of colour for a plain room or try a trendy two tone Venetian Blind with a unique playful style - your local Hunter Douglas showrooms can guide you through the wide range of options to create a truly stand out window treatment for your home.

WHO WE ARE

INNOVATION IS OUR HERITAGE

For over 70 years, Hunter Douglas have been the world's leading manufacturer of window coverings and architectural window products.

We create innovative, high quality products which can be found in millions of homes and high-profile commercial building projects across the globe. We operate in 100 countries and employ over 20,000 employees worldwide.

And working side-by-side with the design and architectural community, we collaborate to develop exciting new solutions which manage light, heat and acoustics - using the latest sustainable and responsible production techniques to deliver outstanding performance and exceptional durability.

DRAWING BOARD TO INSPIRING REALITY

At Hunter Douglas, we help bring ideas to life; developing smarter ways of tackling stubborn real-world obstacles and offering improved design, comfort and sustainability.

The solutions we manufacture at our global network of specialised production facilities meet rigorous international standards and can contribute towards LEED, BREEAM, HQE, DNGB and ESTIDAMA certification.

GREAT PRODUCTS START WITH GREAT DESIGN

Innovation is in our DNA. Ever since we created the first aluminium blind in 1946, we've kept pushing the idea of what our products can bring to the home or commercial building. To us, form and function are inseparable. That's why we continuously invest in research and development – applying meticulous attention to detail at every stage of the process – and creating solutions which offer excellence in aesthetics, energy efficiency, safety and smart technology with our signature 'Beautiful Light Control'.

AT THE FOREFRONT OF NEW 21ST CENTURY THINKING

We manage light, heat and energy in innovative, exciting ways; reducing the need for artificial lighting, cooling and heating. Our world-class engineering facilities produce window coverings which set new standards in versatility, durability and style – and we are also setting the pace in advanced Motorisation Technology.

PRIVACY & SECURITY

From high-rise city apartments to country homes, everyone values their personal space and security.

Which is why we're experts in creating solutions which both manage light and offer flexible privacy features.

Our unique solutions like motorised Top Down -Bottom Up shades; operate effortlessly in the fully open, fully closed or somewhere in between, depending on the time of day and personal privacy preferences.

And PowerView® Motorisation systems enables home owners to automatically control their Hunter Douglas window treatments from a smart phone, tablet or remote – even when they're not at home – choosing their preferred privacy and light control settings any time of the day or night.

EXPERTS IN ELEGANT FABRICS & INNOVATIVE MATERIALS

Our specialist team includes dedicated textile and material designers, technical innovators, craftspeople and engineers who create our unique products with traditional craftsmanship and the latest manufacturing techniques. This leads to innovative designs which can deflect and redirect sunlight precisely. With our specially engineered translucent fabrics diffusing harsh sunlight and drawing it deeper into the room – dispersing the light to help illuminate homes naturally and reduce the need for artificial light.

RIGOROUS TESTING METHODS

We use proprietary manufacturing processes and rigorous testing methods to ensure our products meet the strictest controls and international standards for performance. It's why our window treatments deliver unrivalled beauty, performance and long-term reliability.

We test all our products performance for:

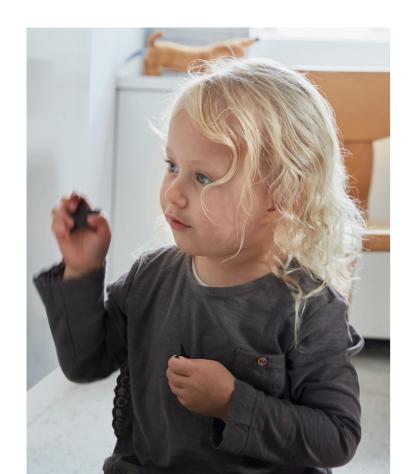

- Glare control
- View-through and privacy
- Heat gain control
- Reaction to fire
- Sound absorption
- Breaking strength, elongation and tear resistance
- Colour fastness and UV-resistance.

We also perform assembly tests to make sure our fabrics combine perfectly with our hardware systems, so:

- Fabrics don't show irregularities like spots or holes
- Fabrics don't fray or cup
- Fabrics don't scratch
- Fabrics don't show waving,
 V-shapes or wavy edges
- Fabrics roll up straight.

DESIGNED WITH SAFETY IN MIND

We're proud to have developed the widest array of patented and award-winning cordless and motorised operating systems - including retractable cords, cord tensioners and wand controls – which were created specifically to offer improved child safety.

INDUSTRY LEADING OPERATING INNOVATION

Our proprietary operating systems make our window treatments easy to use with reliable performance, convenience and improved safety features – identified with our "Designed with Safety in Mind" logo. Our innovations include award-wining LiteRise® and UltraGlide® and the revolutionary PowerView® Motorisation - an advanced home automation system that allows Hunter Douglas window treatments to be conveniently operated via a smart phone, tablet or remote control based on personalised settings.

POWERVIEW[®] MOTORISATION

Smart devices and home automation are changing the way we live. And we are part of that revolution, with our new PowerView® Motorisation system enabling the precise control of Hunter Douglas window treatments from a smart phone, tablet or remote control. PowerView® automatically moves a single blind, or all the blinds in the home, to customisable pre-set favourite settings – offering the ultimate control of light, privacy, security and energy efficiency.

ULTRAGLIDE®

UltraGlide® features a choice of a single retractable cord or wand which remains a constant length when the window treatment is raised or lowered – so there are no long, dangling cords. This improves child and pet safety.

LITERISE®

The cordless LiteRise® system is designed with safety in mind - simply push up with your hand to raise and pull down to lower and your shades stay right where you put them.

SUSTAINABILITY IN ACTION

Protecting the future with sustainable products

For over 70 years, Hunter Douglas has pioneered sustainability through the innovative design of our proprietary product solutions, advanced operating systems and high-performance architectural products. Our solutions help reduce energy loss, save on heating and cooling costs to create more energy efficient and comfortable homes and offices.

Responsible design solutions for a healthier world

Hunter Douglas is committed to being a responsible manufacturer, customer, employer, vendor and neighbour. As part of our constant commitment to sustainability and responsible development, we always look to improve production processes, eliminate waste and reduce maintenance.

YOUR PARTNER IN DESIGN

If you are a professional interior designer, architect, or general contractor working with a homeowner on their interior design project – or you're involved in a commercial architecture development, Hunter Douglas can support you with inspiring product solutions and unparalleled quality.

From concept and specification through to installation, our culture of innovation and superior product development can deliver close support and services including:

- Project management and design support
- Project quote and specification advice
- Technical resource and product galleries
- Free training courses
- Installation services
- Special buying privileges
- New product previews
- Technology and motorisation support
- Model room services

If you have any questions about the Hunter Douglas programme, please contact our specialist team. See the directory on pages 148 - 149.

LET'S TALK

Whetheryou're looking for specific product information or just some sound advice, our experienced team is here to answer your questions and find the best solutions for your home.

Prefer to chat face to face?

To discover more about our beautiful and innovative products, and for insightful expert advice, contact any one of our nationwide network of authorised showrooms. To find the closest to you, use the showroom locator on our website.

Looking for trends or design tips to get inspired?

We've got lots of ways to share our latest ideas and insider expertise. Follow us on Facebook, Twitter, WeChat and Instagram and keep checking our blog and Pinterest boards for our latest innovations and ideas, plus all you need to know from the design world.
